

Medicine for miscarriage

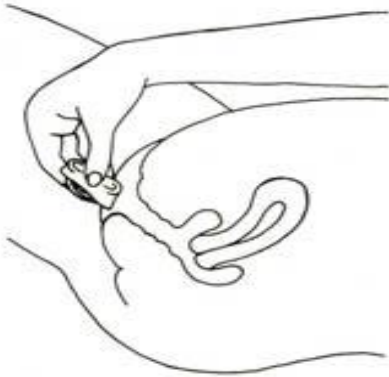

Today you will take
a pill (mifepristone) by
mouth in clinic or in OB
Triage

Keep Drinking
Plenty of Fluids

24 hours after taking the first pill

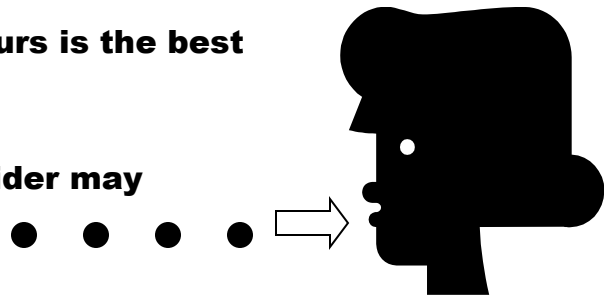

Insert 4 pills (misoprostol) vaginally

- Insert pills the same way you would insert a tampon, towards the back of the vagina.
- Lie down for 30 minutes to make sure the medication will be absorbed.
- After 30 minutes if any of the pills fall out, it is OK. The medicine has already been absorbed in the body.

After inserting the 4 pills vaginally

You may take pain medication for cramping.

- **IBUPROFEN (Motrin)**, 3-4 pills, every 4-6 hours is the best for cramping pain
- If other pain medicine is needed, your provider may prescribe it

In The Following Days:

If you have
cramps, take
ibuprofen as
needed

BLEEDING
should slow
down

CRAMPS should
go away

**You should
feel back
to normal**

If you need to call:
- 505-925-4455
for the clinic
(weekday)
- 505-380-0227
for the on-call
physician after
hours
